Owais Ali Khadim Batti

+91-86185-99851 | okbatti@gmail.com | linkedin.com/in/owais-ali-khadim-batti | github.com/Okbatti | Bangalore, India

Summary

Computer Science student focused on AI, machine learning, and emerging technologies. Builds hands-on projects that turn ideas into working products—from multi-agent systems to AI-powered tools. Comfortable in fast-paced, ambiguous environments with a long-term aim to build and scale technology-driven products that create real-world impact.

Education

B.M.S. College of Engineering — Bengaluru, India
Bachelor of Engineering in Computer Science — *Expected May 2027*

Bishop Cotton Boys' School — Bengaluru, India
12th Grade — Computer Science — *March 2023*

St. Joseph's Boys' School — Bengaluru, India
10th Grade — Computer Science — *March 2021*

Experience

Club Coordinator — Apr 2026 – May 2026
DeathScape, B.M.S. College of Engineering — *Bengaluru, India*

- Coordinated DeathScape 2.0, ranked among the top events out of 100+ events at the fest.
- Managed the technical part of the event and participant flow for 300+ participants, ensuring smooth event execution.

Event Coordinator — Nov 2024 – Dec 2024
College Tech Fest — *Bengaluru, India*

- Organized and led a technical event, placing 2nd among 100+ events.
- Drove 500+ participant registrations through coordination and outreach efforts.

Projects

OpenClaw – Multi-Agent Orchestration System | *Python, OpenAI API, Raspberry Pi, Tailscale*

- Built a multi-agent orchestration system with a central agent coordinating specialized sub-agents for research, financial data, coding, and trend analysis.
- Deployed on a Raspberry Pi with remote access via Tailscale — a private, low-cost AI team without cloud infrastructure.

Browzie – AI Webpage Assistant (Chrome Extension) | *Python, FastAPI, LLM APIs, Embeddings*

github.com/Okbatti/Browzie_AI

- Built an AI browser assistant that summarizes webpages and answers context-aware questions using a lightweight RAG-style pipeline.
- Designed with prompt control, response validation, and privacy-preserving session-based architecture.

MedDoc – Medical Report Analysis Assistant | *Python, NLP, LLM APIs, OCR, FastAPI* github.com/Okbatti/MedDoc

- Developed an AI system to extract and analyze data from uploaded medical reports using OCR and LLMs.
- Implemented document-grounded Q&A with safety guardrails to prevent hallucinations and unsafe medical advice.

Cube Collision Game | *Python, Game Logic, Algorithms* — Published on Google Play Store

- Developed a real-time physics-based mobile game with collision detection using vector-based calculations.
- Optimized update loops for smooth, consistent performance across devices.

Technical Skills

Languages: Python, Java, C, SQL

Frameworks & Tools: FastAPI, OpenCV, OpenAI API, Gemini API, Claude Code, Codex, Git, GitHub, Raspberry Pi, Tailscale, Arduino IDE, Unity, SQLite, OCR

Concepts: Neural Networks, Deep Learning, RAG Pipelines, Prompt Engineering, API Development, Basic Robotics, Game Development

Certifications

Neural Networks and Deep Learning — DeepLearning.AI (Andrew Ng) — Jul 2025

Principles of Generative AI — Google Cloud — Oct 2025
